Instructional Video

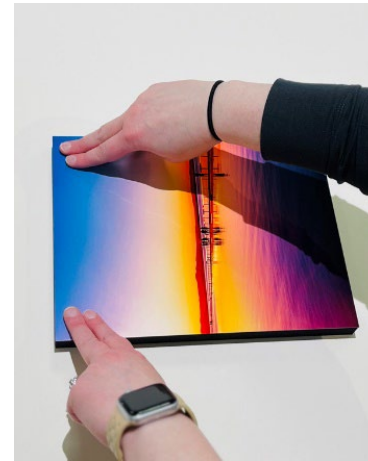

1. Remove release liner from board to expose repositionable adhesive.

2. Be sure photo is sized to match the board.

3. Without applying pressure, gently place photo onto the adhesive surface and align all edges by hand.

4. Press two corners along one side to tack into place.

5. Using the soft edge of the enclosed application tool, start at the tacked edge and apply medium pressure across the surface. Use multiple overlapping passes in the same direction.

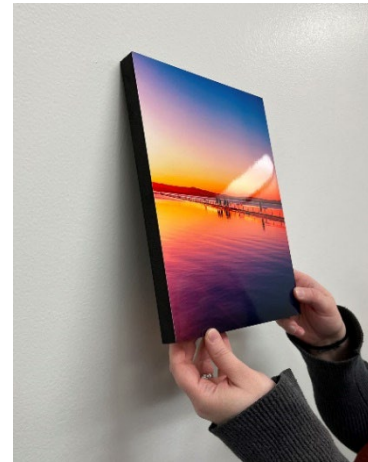

6. Turn over to expose the backside of the board. Remove brown paper liner from the magnetic fastener to expose adhesive and apply firmly to the top of the board.

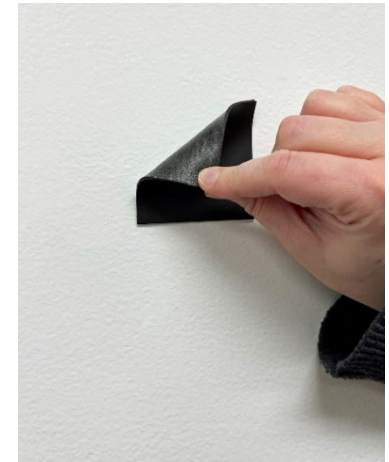

7. With clean dry hands, peel off white paper liner to expose the removable adhesive.

8. Ensure surface is flat, smooth, dry, and free of dust, dirt, or oil. Position your finished board in desired location and firmly apply pressure to the board for 30 seconds.

9. To remove board from the surface, hold on both sides and gently pull upwards.

10. To remove tape from the surface, starting at one corner, slowly peel the adhesive at a steep angle.
